It has been in the agriculture products business in different capacities. Starting form trading to brokerage to processing they have been working in all core areas of the Agro business.

Peanut specification manual

Peanut seed varieties are considerably diversified in the Indian peanut industry. Seed types vary in short (90 days) and long (130 days) harvest cycles. Farmer's choice of seed varieties are based on soil type, yield expectation, water availability and market conditions. All the seed types are non-GMO. Each peanut variety has a specific utility. Even though various seed types falls under the generic variety "java" there are many types of java to choose from, in order to get an optimal result of the end product. Microbiology, nutrition and shelf life may vary between different seed varieties of the same type.

Peanut varieties

Raw Shelled Peanuts

Bold Type Peanuts: 38/42, 40/50, 50/60, 60/70 Counts/Ounce

Elongated shape with a lower diameter in the middle.

Testa is thick & color is from dark pink to dark brown/red.

High in oil content 45-52%, high in lipid profile and fats. Intense aromatic/roasted flavor with no sour or bitter taste. Lowest aflatoxin risk and longer shelf life.

Type	Bold Peanuts
